

Okezue Bell

Creator, ideator, changemaker, biotech and AI developer

Okezue Bell is an artificial intelligence developer and biology researcher focused on creating high-impact and sustainable solutions in a variety of areas. More recently, Okezue's works have been in the field of cellular agriculture, having advised for Aleph Farms, done scientific work and consumer studies at New Harvest, written over 20 articles about it, and is now working with Perfect Day/The Urgent Company. He's also worked on a team consulting project in collaboration with the UN and The Knowledge Society, and is currently developing a brain-controlled prosthetic for transhumeral amputees with sponsorship from OpenBCI, and mentorship from researchers at Stanford and Harvard. He's also done speaker popups at some of the largest developer conferences in Switzerland and Canada. Beyond his projects and experiences, Okezue is constantly striving to learn, grow, and innovate, with the ambitious goal of ultimately helping billions of people.
