

Sofia Sanchez

Sofia Sanchez is an ambitious teenager developing biotech projects. She has worked with top researchers from the top University in Mexico, Tecnológico de Monterrey, in the gene editing field for therapeutic applications. As an avid communicator, she has published over 40 articles on her Medium blog, reached more than 2,000 plays for her podcast, and spoken alongside a Netflix director of engineering. Through her growing passion for sustainability, she is leading an iGEM team to create better biofertilizers and has interned at Grow Your Own Cloud (a biotech startup tackling data warming through biotechnology). Her current independent work includes developing new projects in cellular agriculture and getting hands on biotech tools at the lab. Sofia's mission is to bring innovative, impactful, and sustainable solutions to the hands of consumers and into the world.
