

Sriya Chintalapalli

Sriya is a 16 year old machine learning (ML), extended reality (XR), & brain computer interface (BCI) developer building the next ubiquitous interface. She's shared her projects and vision at WEEXPO India, the Zappos All Hands, Games Immersion Conference (G.I. Con), and the Immersive Learning Research Network Conference. Currently, she is focused on building out both a depth and breadth of expertise in emerging technology and sciences, along with a toolbox of mental models to solve the world's biggest problems, impacting billions. She was the founder and executive director of Nourish 2 Nurture (N2N), an organization that worked towards ending hunger by building community gardens and partnering with restaurants to distribute meals to daily wage earners. During the COVID-19 quarantine lockdown, they distributed over 75,000+ meals across India to daily wage earners who were laid off during the pandemic. This was featured in the Times of India, The Economist, The Hindu, among others. She was inspired by the project to find larger solutions with greater impact to multi-faceted global issues. Now, she is working in the alternative protein space with Perfect Day and as an advisor for Aleph Farms, to make a dent in hunger and climate change from a first principles problem solving approach.
